

# uRos2026 Programme

## Conference Programme

Paris · 18–20 November 2026

### PROGRAMME

## Wednesday, 18 November 2026 - Tutorial Day

| Time        | Room 1                                                                                                                                                      | Room 2                                                                                                                                     | Room 3                                                                                                                                                                                                        |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09:00–10:30 | <b>Getting Started with Positron: A Next-Generation IDE for Data Science</b><br><a href="#">Cetinkaya-Rundel Mine</a> , <a href="#">Dervieux Christophe</a> | <b>Spatial Analysis and Cartography with R</b><br><a href="#">Antunez Kim</a>                                                              |                                                                                                                                                                                                               |
| 10:30–11:00 | Coffee break                                                                                                                                                |                                                                                                                                            |                                                                                                                                                                                                               |
| 11:00–12:30 | <b>R in the Age of LLMs: From AI-Assisted Development to Chat-Based Data Applications - I</b><br><a href="#">Michonneau François</a>                        | <b>Mapping Official Statistics with the tmapverse and cols4all</b><br><a href="#">Tennekes Martijn</a>                                     | <b>Managing statistical disclosure control from microdata to protected linked tables with rtuargus</b><br><a href="#">Ferrer-Pradines Nadège</a> , <a href="#">Desclozure Julien</a>                          |
| 12:30–13:30 | Lunch Break                                                                                                                                                 |                                                                                                                                            |                                                                                                                                                                                                               |
| 13:30–15:00 | <b>R in the Age of LLMs: From AI-Assisted Development to Chat-Based Data Applications - II</b><br><a href="#">Michonneau François</a>                       | <b>From Data to Models: Hands-On Machine Learning with R</b><br><a href="#">Pérez Bote Adrián</a> , <a href="#">Barragán Andrés Sandra</a> | <b>Working with categorical data and codelists in R</b><br><a href="#">Van Der Laan Jan</a> , <a href="#">De Jonge Edwin</a>                                                                                  |
| 15:30–16:00 | Coffee break                                                                                                                                                |                                                                                                                                            |                                                                                                                                                                                                               |
| 16:00–17:30 | <b>Opening the Black Box: Interpreting Machine Learning Models with SHAP Values in R</b><br><a href="#">Panaiotis Thelma</a>                                |                                                                                                                                            | <b>Tidy Survey Analysis in R: Working with Weights and Sampling Designs for Official Statistics</b><br><a href="#">Zimmer Stephanie</a> , <a href="#">Powell Rebecca</a> , <a href="#">Velásquez Isabella</a> |

# Thursday, 19 November 2026 - Conference Day 1

| Time        | Room 1                                                                             | Room 2                                                                   | Room 3                                                        |
|-------------|------------------------------------------------------------------------------------|--------------------------------------------------------------------------|---------------------------------------------------------------|
| 08:00–09:00 | Registration and walk-in                                                           |                                                                          |                                                               |
| 09:00–09:15 | Opening                                                                            |                                                                          |                                                               |
| 09:15–10:15 | <b>Keynote: R and Open-Source: A love story</b><br><a href="#">Killick Rebecca</a> |                                                                          |                                                               |
| 10:15–11:00 | <b>EMOS session I</b><br>(chair: Tina Steenvoorden)                                |                                                                          |                                                               |
| 11:00–11:30 | Coffee break                                                                       |                                                                          |                                                               |
| 11:30–13:00 | <b>A1 - AI Assistants for Statistical Production</b>                               | <b>B1 - Reproducible Statistical Production Pipelines</b>                | <b>C1 - Automated and Accessible Statistical Publishing</b>   |
| 13:00–14:00 | Lunch break                                                                        |                                                                          |                                                               |
| 14:00–15:30 | <b>A2 - AI, Machine Learning and Intelligent Automation</b>                        | <b>B2 - Lightning Talks I: Production, Validation and Survey Methods</b> | <b>C2 - Shiny Applications and Statistical Visualisation</b>  |
| 15:30–16:00 | Coffee break                                                                       |                                                                          |                                                               |
| 16:00–17:30 | <b>A3 - Open Source Adoption and the R Community</b>                               | <b>B3 - Seasonal Adjustment in Official Statistics</b>                   | <b>C3 - Statistical Disclosure Control and Synthetic Data</b> |

## EMOS session I

### Presentations

- An R Framework for AI-Assisted Questionnaires in Official Statistics: An Application to Financial Literacy Surveys  
[Rossi Valeria](#)
- Developing a territorial One Health indicator using R  
[Limone Fenicia Carmen](#)
- R-Based Visualization of Continuous-Time Markov Migration Models  
[Boukouvala Anna](#), [Tsaklidis George](#)

## A1

### AI Assistants for Statistical Production

- 110 billion euros, one deadline, zero regression: migrating a critical calculation service to R with AI  
[Guyader Vincent](#), [De Canteloube Matthieu](#)
- An AI-Powered Analysis Assistant for Large-Scale Official Statistics  
[Hauke Oliver](#)
- Large Language Models as Assistants for Time Series Analysis in Official Statistics: Opportunities for Innovation and Capacity Building  
[Suzić Jelena](#)
- Scaling Local LLM Coding Assistants for R, Python and SAS in Official Statistics  
[Fischer Bernhard](#)
- Using LLM's for automated translation of Excel files and SAS scripts to R  
[Jahn Andreas](#)

## B1

### Reproducible Statistical Production Pipelines

- Modernizing Global Survey Data Processing: Reproducible R Pipelines at the IEA  
[Moser-Nussgruber Winfried](#), [Kowolik Kamil](#)
- Integrating Time Series Processing into an Automated Production Workflow in R  
[Heidsieck Suzanne](#)
- Spipe: a lightweight workbench for building and monitoring reproducible analytical pipelines in R, illustrated on the GEM Luxembourg production and analysis chain  
[Pettinger Maxime](#)
- The {ProduceR} package: streamlining and improving the reliability of statistical production  
[Reduron Vincent](#)
- Building an internal package ecosystem for data processing  
[Kis Viktoria](#), [Lee Erika](#), [Normandeau Simon](#), [Otavo Peña Sara](#)

## C1

### Automated and Accessible Statistical Publishing

- Automated Public Science Communication: Building a Bluesky Bot for Real-Time Official Statistics Visualisation with R  
[Damien Dupre](#)
- Beyond parametrised reports: Adventures automating country notes at the OECD  
[Caldas Rivera Maria Paula](#), [Ilizaliturri López Rodolfo](#)
- From code to print-ready publication: Automating layout at the French Ministry of Justice  
[Marsal Adam](#), [Allard Fanny](#)
- From R Markdown to Accessible PDF: Building Tagged Word Documents and Templates for Official Statistics Publications  
[Dominik Ernst](#)
- Reproducible Statistical Publications with Quarto  
[Dervieux Christophe](#)

## A2

### AI, Machine Learning and Intelligent Automation

- Beyond Use Cases: Modular R Packages for Automated Coding and Data Extraction  
[Niederhametner Nina](#), [Vattheuer Eileen](#), [Steiner Marlene](#)
- Bridging R and Python for AI-Driven NLP  
[Lykos Georgios](#), [Dimas Spyridon](#), [Panagopoulou Georgia](#), [Vikentios Michail](#)
- Structuring Annual Reports for Official Statistics: A Method for Data Editing Using Large Language Models  
[Solveig Bjørkholt](#), [Islam Mousumi Mona](#), [Sarah Torvholm Frøystad](#), [Johansen Odin](#), [Maryam Javed](#)
- A Comparison of Model-Based and Unsupervised Learning Methods for Detecting Scaling Errors in R  
[Marcello D'orazio](#), [Faricelli Cristina](#), [Magistro Renato](#)
- Unsupervised Learning Approaches for Identifying Structural Anomalies in European Regional Statistics  
[Bogdan Oancea](#)

## B2

### Lightning Talks I: Production, Validation and Survey Methods

- Common pitfalls when switching from SAS to R  
[Lamarche Pierre](#)
- Template and Function: A Tabular Configuration Pattern for Large Scale Operations on Files with Varying Schemas in Official Statistics  
[Rakotomalala Daniel](#)
- R you useful for maintaining information systems?  
[Mainguené Alice](#)
- {IssueTrackerR}: Handling Tickets in R  
[Barthelemy Tanguy](#)
- From Data to Publication : An Automated R-Based Framework for Consumer Price Index Reporting  
[Aoulad Hammou Achou Zineb](#), [Halhal Zakariae](#)
- Metadata-driven validation across the statistical production process using R  
[Konradsdottir Ragnhildur](#), [Calian Violeta](#)
- Facilitating R-Based Statistical Validation Through EZR: A Case Study in Melanoma High-Frequency Ultrasound Assessment  
[Chalyy Kyrylo](#), [Hryshchenko Roman](#), [Bogomolets Olga](#), [Stepanenko Viktor](#)
- Manual Rework Volume Monitoring and Forecasting Tool  
[Coltier Yves](#)
- Semi-automated editing of large volumes of foreign trade data for the environmental Economy-Wide Material Flow Account  
[Campandegui García Gorka](#), [Maestro López Julia](#)

- **VIM::vimpure: A Unified Imputation Engine for Flexible Missing Data Workflows in R**  
[Kowarik Alexander](#), [Vattheuer Eileen](#), [Templ Matthias](#), [Gussenbauer Johannes](#), [Niederhametner Nina](#)
- **Sampling Designs and Sample Quality Control: Using Quarto Documents in Agricultural Surveys**  
[Levi-Valensin Michael](#)
- **RISQ: Representativity Indicators for Survey Quality**  
[Idema Reijer](#)
- **Reproducible Survey-Based Estimation of Household Living Standards in Morocco Using ENNV 2022 Microdata**  
[Baabaa Oussama](#)
- **SmartSurveyAgent: A New Approach to Survey Data Collection in Official Statistics**  
[Cafieri Simona](#)

## C2

### Shiny Applications and Statistical Visualisation

- **Rapid Crisis-Oriented Survey Visualization in Official Statistics: Flood Damage in Polish Agriculture Using R**  
[Grabarczyk Kamil](#)
- **phsshiny: An R Package for Standardisation and Accessibility in the Publication of Health Data**  
[Gribben Ciara](#), [McCreath Russell](#), [McBride Bateman](#)
- **Public-Facing Shiny Apps at Statistik Austria: Corporate Design, Accessibility, and Secure Deployment by Design**  
[Seewann Lena](#), [Dominik Ernst](#)
- **R Shiny Platform for Detecting, Validating, and Reporting River Overflow Periods**  
[Movsisyan Vahe](#), [Habet Madoyan](#), [Karapetyan Ina](#)
- **Creating population pyramids in less than 100 lines of code**  
[Neutze Michael](#)

## A3

### Open Source Adoption and the R Community

- **Beyond code: supporting teams through the transition to Open Source**  
[Simon Raphael](#), [Biot Vincent](#), [Rigollot Nathalie](#), [Said Meriem](#)
- **From SAS to R, one small step for data production, one giant leap for official statistics**  
[Lamarche Pierre](#), [Rousset Clément](#)
- **Towards metrics for awesome software packages: first results**  
[Ten Bosch Olav](#), [Van Der Loo Mark](#)
- **What makes the R community unique?**  
[Lesur Romain](#)
- **Publishing in the R Journal**  
[Van Der Loo Mark](#)

## B3

### Seasonal Adjustment in Official Statistics

- **Assessing Direct and Indirect Seasonal Adjustment Approaches for Labour Cost Indices: A Serbian Case Study**  
[Suzić Jelena](#), [Tokai Melinda](#), [Katić Dunja](#), [Marković Ana](#)
- **pickmdl3: An R package implementing the X-12-ARIMA pickmdl procedure within the JDemetra+ R framework**  
[Jens Kristoffer Haug](#), [Langsrud Øyvind](#), [Seierstad Ane](#), [Jentoft Susie](#), [Hamre Jørn Ivar](#), [Pham Dinh Quang](#)
- **regimeseats: An Adaptive State-Space Extension for TRAMO-SEATS in Official Statistics**  
[Amoroso Cheyenne](#), [Aneiros Germán](#), [García-Martos Carolina](#), [Koopman Siem Jan](#), [Vilar José A.](#)
- **The RJDverse Package Suite for Time Series Econometrics in Official Statistics**  
[Webel Karsten](#), [Smyk Anna](#)
- **{stlpro}: Seasonal Adjustment with Cross-Validated Filter Selection**  
[Ollech Daniel](#)

### C3

## Statistical Disclosure Control and Synthetic Data

- A wavelet protection method for publishing maps

[De Jonge Edwin](#)

---

- ckm: an easy application of cell-key method to protect tabular data

Ferrer-Pradines Nadège, Desclodure Julien, [Lemaire Dimitri](#)

---

- Protecting linked tables with non-nested hierarchies: a use case with rtuargus

Ferrer-Pradines Nadège, [Desclodure Julien](#), Lemaire Dimitri

---

- rebalancedNoise: Perturbative Statistical Disclosure Control for Magnitude Tables in R

[Meindl Bernhard](#)

# Friday, 20 November 2026 - Conference Day 2

| Time        | Room 1                                                                       | Room 2                                                                  | Room 3                                                          |
|-------------|------------------------------------------------------------------------------|-------------------------------------------------------------------------|-----------------------------------------------------------------|
| 08:00–09:00 | Registration and walk-in                                                     |                                                                         |                                                                 |
| 09:00–10:00 | <b>Keynote: Practical AI for Data Science</b><br><a href="#">Couch Simon</a> |                                                                         |                                                                 |
| 10:00–10:45 | <b>EMOS session II</b><br>(chair: Tina Steenvoorden)                         |                                                                         |                                                                 |
| 10:45–11:15 | Coffee break                                                                 |                                                                         |                                                                 |
| 11:15–12:45 | <b>A4 - Survey Sampling, Weighting and Variance Estimation</b>               | <b>B4 - Social and Economic Applications</b>                            | <b>C4 - Record Linkage and Population Registers</b>             |
| 12:45–13:45 | Lunch break                                                                  |                                                                         |                                                                 |
| 13:45–15:15 | <b>A5 - Spatial and Small Area Analysis</b>                                  | <b>B5 - Lightning Talks II: R Tools, Visualisation and Applications</b> | <b>C5 - Imputation and Advanced Statistical Methods</b>         |
| 15:15–15:45 | Coffee break                                                                 |                                                                         |                                                                 |
| 15:45–17:15 | <b>A6 - Nowcasting and Time-Series Methods</b>                               | <b>B6 - Survey Quality, Metadata and Fieldwork</b>                      | <b>C6 - Infrastructure and Tools for Statistical Production</b> |
| 17:15–17:30 | Closing                                                                      |                                                                         |                                                                 |

## EMOS session II

### Presentations

- Typology of business ecosystems in European Union countries  
[Ulada Dalidovich](#)
- AI, Robotization and Perceived Occupational Displacement across European regions - an R based Spatial Econometrics Analysis  
[Petre Vlad-Andrei](#), [Cimpoeru Smaranda](#)
- Long-Term Effects of the Czech National Bank's Exchange-Rate Commitment: A Synthetic Control Approach in R  
[Valtr Ondřej](#)

## A4

### Survey Sampling, Weighting and Variance Estimation

- Calibration of Survey Weights in R: A Comparative Overview of Available Packages  
[Szymkowiak Marcin](#), [Wilak Kamil](#)
- Developing an R Package for Sample Weight Estimation  
[Osier Guillaume](#), [Lamboray Claude](#)
- samplr: A Tidy Grammar for Survey Sampling Design in R  
[Ahmadou Dicko](#)
- Making gustave production-ready: multistage designs, wrapper inspection and estimation diagnostics.  
[Delclite Thomas](#)
- weightflow: a declarative, auditable recipe for survey weighting in R  
[Ferreira Juan Pablo](#)

## B4

### Social and Economic Applications

- Behind-the-Scenes Complexity, Clear Insights Up Front: Longitudinal Minimum Income Benefit Analysis in a French Local Authority, from Database to Simple Indicators  
[Chosson Elie](#)
- Event-sequence analysis of fertility histories with TraMineR, INDSCAL and DISQUAL  
[Morand Elisabeth](#)
- Mental health and social participation: A data-driven analysis using R  
[Camelia Maria Dan](#), [Cristina Rodica Boboc](#)
- Reproducible Machine Learning with Tidymodels for NHL Draft Prediction  
[Lochner Tobias](#), [Friedman Alon](#)

## C4

### Record Linkage and Population Registers

- Building a register-based resident population from administrative data with R  
[Danek Zofia](#), [Strojny Tymoteusz](#), [Beręsewicz Maciej](#), [Czerniawska Aniela](#)
- Linking Administrative Data Without Unique Identifiers: A randomForest Approach in R  
[Nölting Christopher](#), [Hajiyev Murad](#)
- postlink: An R Package for Post-Linkage Data Analysis  
[Bukke Priyanjali](#), [Kamat Gauri](#), [Cui Jiahao](#), [Gutman Roei](#), [Slawski Martin](#)
- Probabilistic Record Linkage with the automatedRecLin R package  
[Struzik Adam](#), [Beręsewicz Maciej](#)
- Reconciling Local and National Demographic Accounts in R  
[Ward Daniel](#)

## A5

### Spatial and Small Area Analysis

- 3D Thematic Mapping in R with tmap v4 and tmap.mapgl  
[Tennekes Martijn](#)
- Measuring Spatial Inequalities in University Accessibility Using R and GTFS Data: Evidence from Rome  
[D'aniello Armando](#), [Salvucci Gianluigi](#)
- Bayesian Small Area Estimation for Multinomial Health Indicators Using R: An Application to Official Statistics  
[Nikolaidis Ioannis](#), [Giakoumatos Stefanos](#)
- Small Area Estimation of Poverty in the Practice of Statistics Poland  
[Szymkowiak Marcin](#), [Wilak Kamil](#), [Józefowski Tomasz](#), [Yoshida Nobuo](#)
- Automating Educational Statistics Production Processes Using R and Shiny: A Case Study from Turkish Statistical Institute  
[Ozbek Fethi Saban](#)

## B5

### Lightning Talks II: R Tools, Visualisation and Applications

- Who owns R?  
[Porsman Maria](#)
- How many R packages in CRAN do you know?  
[Kiener Patrice](#), [Dutang Christophe](#)
- ILSAmerge and ILSAstats: Two new R packages for international large-scale assessments  
[Christiansen Andrés](#)
- Rrepest: An Analyzer of International Large Scale Assessments in Education  
[Ilizaliturri López Rodolfo](#), [Avvisati Francesco](#), [Keslair François](#)
- {loomer} - A high-performance auxiliary R package for analyzing the Danish Lifelines dataset  
[Kashnitsky Ilya](#)
- Further microdata anonymisation tools in R  
[Caputi Marco](#)
- Automatic classification of pastoral-use parcels / Classification automatique des parcelles À usage pastoral  
[Thion Romuald](#)
- Use of R Packages for Cartography: The Case of Road Traffic Accident Statistics in Luxembourg  
[Osier Guillaume](#), [Dere Alexi](#), [Bodson Lucile](#)
- Mapping the Gendered Impact of Economic Shocks: A Spatial Analysis of Mancession vs. Shecession across European Regions  
[Trascan Andreea-Denisa](#), [Camelia Maria Dan](#)

- One R, Many Stories: R as a Visual Language to Tell a Country's Public Health Narrative

[Bajador Jerico](#)

- Estimating French election results like the pollsters from partial vote counts on election night: a transparent, reproducible R approach based on open public data

[Guinhut Thomas](#), [Delaune Eulalie](#), [Winckell Romain](#)

- The Effects of Skills on Gender Wage Inequality in the Digital Economy

[Petraşcu Gianina-Maria](#), [Trascan Andreea-Denisa](#)

- Why Do Some Counties Perform Better? Educational Hubs, High-Tech Development and Skills Mismatch in Romania

[Boboc Cristina](#), [Petraşcu Gianina Maria](#)

- Understanding International Remittance Flows: A Comparative Analysis Across Distinct Corridors Using Hybrid Machine Learning Methodologies

[Zhang Jing](#)

- The Intellectual Architecture of Artificial Intelligence-Driven Work Transformation: A Large-Scale Scientometric Exploration of Global Research Dynamics

[Barbulescu Ioana](#), [Ciuhu Ana-Maria](#), [Vasile Valentina](#), [Suciu Andrei](#)

## C5

### Imputation and Advanced Statistical Methods

- MRimputation: An R Package for Multiply Robust Imputation

[Czerniawska Aniela](#), [Beręsewicz Maciej](#)

- Preprocessing Categorical Variables through Edit-Induced Equivalence Classes in ARTIC

[Toti Simona](#), [Filippini Romina](#)

- Aggregating incomplete data: accounting for hierarchical relationships

[Kis Viktoria](#), [Lee Erika](#), [Normandeau Simon](#), [Otavo Peña Sara](#)

- Estimate distributions with fat and skewed tails with the FatTailsR package

[Kiener Patrice](#)

- What's new for time-to-event data in tidymodels

[Frick Hannah](#)

## A6

### Nowcasting and Time-Series Methods

- An R-Based Nowcasting Dashboard for Industrial Production Index: Comparative Analysis of Classical and Machine Learning Methods

[Dedeoglu Duygu](#), [Sert Osman](#)

- Harvesting Data as Crops Are Harvested : An Automated R Pipeline for Timely Yield Estimates

[Touzani Hanan](#)

- Making Singular Spectrum Analysis More Accessible: A Step-by-Step Framework and R Implementation

[Delaune Eulalie](#)

- Using R to provide a new interface to an old time series program

[Mélard Guy](#)

- KOMA - An R package for Bayesian estimation of simultaneous equation models

[Sarferaz Samad](#), [Scherer Merlin](#)

## B6

### Survey Quality, Metadata and Fieldwork

- BuSuCo: A package for business survey coordination

[Straubinger Johannes](#)

- A Psychometric Approach of Eurostat Business and Consumer Survey: Reliability, Factor Structure and Item Response Theory Analysis using R

[Sandu Mihaela Cornelia](#)

- Predicting Response in Official Mixed-Mode Household Surveys: A Machine Learning Approach

[Succi Raffaella](#), [Di Consiglio Loredana](#), [Mamolo Marija](#)

- The Survey Fieldwork Digital Twin: An R-Based Early-Warning System for Mixed-Mode Official Statistics

[Resulbegoviq Hakile](#), [Čađenović Vuk](#)

- The Metadata Quality Assistant (MQA): an R/Shiny prototype for supporting the preparation of SIMS quality reports

[Spiliopoulou Vasiliki](#), [Pierrakou Christina](#), [Molfetas Konstantinos](#)

## C6

# Infrastructure and Tools for Statistical Production

- AccScript: an R-based domain-specific language for reproducible national accounts production

[Taleb Iliass](#)

- DuckDB beyond R: demystifying the analytical database in your toolbox

[Hiverlet Ines](#)

- National Accountant: A Reproducible R-DuckDB Framework for Balancing Supply and Use Tables with Hard and Soft Constraints

Kocak Assoc. Prof. Necmettin Alpay

- procR: New Features for End-to-End Table Production in Official Statistics

[Saidani Younes](#), [Tran Ngoc-Han](#)

- codelist: working more efficiently with code lists in R

[Van Der Laan Jan](#)
